

1           **ABSTRACT OF THE DISCLOSURE**

2           An adjustable tuning tube for a clarinet is composed of an outer tube and  
3           an inner tube. The outer tube has a first upper chamber, a lower chamber, and a  
4           middle portion between the first upper chamber and the lower chamber. A button  
5           is pivotally mounted in an arcuate slot defined at an outer periphery of the middle  
6           portion and has a finger formed at a first end thereof and extending in the outer  
7           tube, and multiple first teeth formed on the finger. The inner tube is received in  
8           the outer tube, and has multiple second teeth formed at an outer periphery thereof  
9           and matching the first teeth of the button.
